AAISM MASTERCLASS

AAISM MASTERCLASS

AI is now embedded in how your organization operates. The question isn't whether your team needs AI security expertise. It's whether you can afford to wait.

AAISM (Advanced in AI Security Management) is the only certification built entirely around securing and governing AI systems. The professionals who hold it can assess AI risk, govern AI deployments, and protect your organization from a class of threats that traditional security frameworks weren't designed to catch.

Here's what getting your team certified with Destination Certification means in practice:

- ✓ Your employees will almost certainly pass on their first attempt. Our proven system has driven industry-leading first-attempt pass rates across CISSP, CISM, and CCSP.
- ✓ They won't just memorize enough to scrape through an exam. They'll understand how to apply AI security concepts in your environment from day one.
- ✓ They'll have practical tools they can use immediately, before they're even certified.

This brochure has the details. But the short version is this: AAISM certification is quickly becoming a baseline expectation for security teams managing AI, and Destination Certification is the most effective way to get your people there

WHY AAISM

WHY YOUR ORGANIZATION NEEDS AAISM NOW

AI tools are already inside your organization. Whether your team adopted them intentionally or employees brought them in on their own, the security risks are real and they're growing.

Most security frameworks weren't built for AI. CISSP and CISM give your team a strong foundation, but they don't cover the specific threats, governance requirements, and risk management approaches that AI systems introduce. If your team is applying traditional security thinking to AI, there are gaps, and regulators, auditors, and attackers are increasingly aware of them.

AAISM closes those gaps. It's the first certification built entirely around AI security management, and it covers exactly what your team needs to govern AI responsibly: how to assess AI-specific risk, how to evaluate vendors and supply chains, how to build AI governance programs, and how to implement controls that actually protect AI systems.

The professionals who hold AAISM aren't just certified. They're equipped to protect your organization from risks that most security teams are still figuring out how to name.

WHO SHOULD ENROLL

This MasterClass is designed for professionals who are already responsible for security decisions, not for beginners starting from scratch. AAISM certification requires holding an active CISSP or CISM.

The right candidates on your team are likely in roles like:

- Security manager or director overseeing AI deployments or vendor relationships
- Risk or compliance professional navigating AI-specific regulations or audits
- CISO or security architect responsible for enterprise AI governance
- Any CISSP or CISM holder whose work now touches AI systems, data pipelines, or AI vendor contracts

If someone on your team is making decisions about AI security without a credential that proves they know what they're doing, AAISM is the credential that closes that gap.

Employees can enroll and begin studying at any time. They need an active CISSP or CISM to sit for the exam and earn the certification.

WHAT YOUR TEAM WILL GAIN

Destination Certification's AAISM MasterClass doesn't just prepare employees to pass an exam. It prepares them to do the job better.

They will pass the exam.

Our system is built around first-attempt pass rates because that's what actually matters. We teach the practical application of AI security concepts, not just the information needed to guess correctly under exam conditions.

They will be able to apply what they learn immediately.

The MasterClass covers real-world AI governance, risk management, and security controls, not abstract theory. Every enrolled student also receives four practical tools they can put to work in your organization right away:

- AI Data Privacy Checklist
- Vendor AI Risk Guide
- AI Threats Reference
- Fast Fail Rules

They will be trained across all three domains of the AAISM exam:

Domain 1: AI Governance and Program Management (31%)

Domain 2: AI Risk Management (31%)

Domain 3: AI Technologies and Controls (38%)

ABOUT DESTINATION CERTIFICATION

Destination Certification was built by Rob Witcher and John Berti, two of the most respected names in cybersecurity certification training. Together they have trained security professionals at Deloitte, TD Bank, Scotiabank, and Target, and have helped thousands of individuals and organizations achieve their certification goals.

John Berti co-authored the Official ISC2 CISSP Study Guide and has been involved in ISC2 curriculum and exam development for over 20 years. Both Rob and John are trusted by ISC2 to evaluate other training providers' materials, which means when they build a program, it's built to the standard the industry actually uses.

The same proven system that drives our industry-leading pass rates across CISSP, CISM, and CCSP is now purpose-built for AAISM, with instruction led by Joseph Zefrani, a CISSP- and AAISM-certified educator known for making complex security concepts genuinely accessible.

OUR GUARANTEE

We're transparent about what a training program can and can't promise. Nobody can guarantee that every student will pass. Every learner and every exam experience is unique.

When a training provider tells you they offer an "exam pass guarantee," that is not the same thing as a guaranteed pass. In fact, an "exam pass guarantee" is only activated if the student fails the exam.

Our Destination Certification AAISM training program provides everything a student needs in order to pass the exam, but the commitment to study must come from the student. The mindset and techniques with which they approach exam questions are also crucial. We teach the appropriate mindset and techniques in our program, but only the student can apply them during the exam.

In the unlikely event that a student who has completed the Destination Certification AAISM program does not pass the exam, they can:

- Retake our entire program, with full access to our system for as long as they need
- Continue to access weekly live student support sessions for extra study guidance and exam preparation
- Book a private 1-on-1 call to debrief, regroup, and build a study plan focused on passing on the second attempt

For organizations, this means the training investment is protected. Students have everything they need to succeed, with the support structure to get there even if the first attempt doesn't go as planned.

Please note that students will pay an exam fee to ISACA for every exam or retake booked. ISACA member exam fee: US\$459. Non-member exam fee: US\$599.

HOW THE MASTERCLASS WORKS

AAISM is a new certification. Quality preparation resources are still limited, and what exists varies widely in depth and accuracy. We've built the most comprehensive AAISM training available, and structured it so students always know exactly what to study next.

The MasterClass is entirely self-paced, with an intelligent recommendation engine that tracks each student's progress and tells them what to focus on at every step. No wasted time, no gaps.

Every student also attends weekly live group mentoring sessions with an expert AAISM instructor, where they can get questions answered, work through exam strategy, and stay on track for their exam date.

The platform is designed to fit into a busy professional's schedule. It's intuitive, easy to navigate, and built to keep momentum going from enrollment to exam day.

What's included:

**In-depth study material across
all 3 AAISM domains**

**Personalized study schedule
and review guide**

**Weekly live group mentoring
sessions**

Exam Strategy Guide
(built specifically for ISACA's
management-first approach)

Student Workbook

Knowledge Assessments

**iOS / Android Flashcard app
with 718 flashcards**

**Visual MindMaps across all 3
domains**

**Practice Exam modelled on the
real AAISM exam**

**Four practical AI security tools
for immediate workplace use**

Common challenges for AAISM students and how our program solves them:

Common challenges for AAISM students	How our program solves the problem
Content Overload: Overwhelmed by AI security material and unclear how it differs from CISSP or CISM content	Comprehensive yet concise training from a highly experienced AAISM instructor, making AI security concepts engaging and easy to understand
Focus Uncertainty: Uncertain about what to focus on across AI governance, risk, and technical controls	Clear step-by-step guidance from a personalized study schedule and review guide, so students always know what to do and when
Background Gap: No prior AI security experience, or unsure how to connect existing security knowledge to AI-specific concepts	Confidence in an achievable goal as students develop the knowledge and techniques to pass the AAISM exam through detailed videos, written explanations, and live weekly mentoring
Mindset Shift: Getting stuck on ISACA's management-first approach to AI security questions	Live support and guidance from AAISM experts through chat and weekly group mentoring calls

MASTERCLASS SYLLABUS

This MasterClass provides comprehensive, in-depth training across all 3 domains of the current AAISM exam outline.

Domain 1: AI Governance and Program Management

Builds on existing CISSP or CISM foundations and extends them into AI-specific governance frameworks, regulatory requirements, and incident response processes that organizations are navigating right now.

1.1 Stakeholder Considerations and Regulatory Requirements

- Industry frameworks and standards for AI security
- Legal, regulatory, and contractual requirements for AI
- Organizational roles and responsibilities for AI governance

1.2 AI-Related Strategies, Policies, and Procedures

- AI security strategy development
- AI governance policies and standards
- Strategic planning for AI security programs (budgets, resources, business case)

1.3 AI Asset and Data Lifecycle Management

- AI asset identification and classification
- Data governance for AI systems
- AI data lifecycle controls

1.4 AI Security Program Development and Management

- AI security program structure and resources
- AI security metrics and reporting
- AI security awareness and training programs

1.5 Business Continuity and Incident Response for AI Systems

- AI-specific incident response planning
- Business continuity considerations for AI
- Incident classification and escalation for AI events

Domain 2: AI Risk Management

Develops the ability to assess and manage risks, threats, and vulnerabilities specific to AI, including supply chain and vendor risks that traditional security frameworks weren't designed to catch.

2.1

AI Risk Assessment

- Emerging AI threat landscape
- AI-specific vulnerability and control deficiency analysis
- AI risk assessment methodologies

2.2

AI Risk Response and Management

- AI risk treatment and response options
- Vendor and supply chain AI risk management
- AI risk monitoring and reporting
- Regulatory conformity and impact

Domain 3: AI Technologies and Controls

The largest portion of the exam. Covers the technical side of securing AI systems, from architecture design to data privacy in training pipelines to monitoring and controls for AI-specific attack vectors.

3.1

AI Security Architecture

- Designing security architecture specifically for AI
- Integrating AI architecture within enterprise architecture
- AI infrastructure security controls

3.2

AI Security Controls and Implementation

- Designing and reviewing AI security controls
- Securing AI systems across the development and deployment lifecycle
- Data management and privacy controls for AI workflows

3.3

AI Monitoring and Threat Response

- Monitoring AI systems for anomalous behavior
- Responding to AI-specific threats and incidents
- Testing and vulnerability management for AI solutions

MASTERCLASS SYLLABUS

This MasterClass provides comprehensive, in-depth training across all 3 domains of the current AAISM exam outline.

	Essential	Preferred (with Personal Mentoring)	Premier
In-depth study material covering the complete AAISM exam outline	✓	✓	✓
Exam strategies and techniques needed to pass the exam	✓	✓	✓
In-depth study material covering the complete AAISM exam outline	✓	✓	✓
Weekly Live Group Mentoring calls	✓	✓	✓
Personalized schedule and review guide	✓	✓	✓
iOS / Android Flashcard app with 718 flashcards	✓	✓	✓
Visual MindMaps across all 3 domains	✓	✓	✓
Practice Exam modeled on the real AAISM exam	✓	✓	✓
Four practical AI security implementation tools	✓	✓	✓
1-on-1 mentoring call to devise a study plan		✓	✓
1-on-1 mentoring call focused on exam strategy		✓	✓
Unlimited email support		✓	✓
Expert training series (career growth + CPE credits)			✓
Unlimited personal 1-on-1 mentoring			✓
Payment plan	1 year	3 years	Lifetime

Special Launch Pricing*: Join and Save \$200

Payment plan	\$217 (+5 more payments of \$217/month)	\$307 (+5 more payments of \$307/month)	\$827 (+5 more payments of \$827/month)
One-time price	\$1147	\$1597	\$4297
Save with One-time price	\$155 vs. payment plan	\$245 vs. payment plan	\$665 vs. payment plan

*The course opens on June 16, with your access is ready and waiting. After July 12, all plans return to standard pricing permanently.

PROGRAM FAQ

Q. How soon can an employee begin the program?

Immediately. It's entirely self-paced, and students have full access from the moment they enroll.

Q. Is the training up to date?

Yes, everything aligns 100% with the current AAISM exam outline.

Q. Does the employee need CISSP or CISM before enrolling?

They need either an active CISSP or CISM to sit for the AAISM exam and earn the certification. They can enroll in the MasterClass at any time, but we recommend having the prerequisite certification in place before booking an exam date.

Q. How long do employees have to take the exam after registering?

ISACA gives a six-month eligibility window from the date of exam registration. Most students are well prepared before that window closes, but booking the exam date early gives them a clear target to work toward.

Q. Do you offer volume or corporate discounts?

Yes. For organizations training more than five team members, contact us to discuss pricing. Employees don't all need to start at the same time, so there's no disruption to operations. You can purchase training vouchers and use them over an extended period.

Q. Who delivers the training?

The AAISM MasterClass is built and backed by the Destination Certification team, co-founded by Rob Witcher and John Berti, and delivered by Joseph Zefrani, a CISSP- and AAISM-certified instructor.

Q. What are your pass rates?

We focus on first-attempt pass rates because they tell you far more about how well a program prepares students than overall pass rates do. AAISM is a newer certification so we're still building that data, but every student who doesn't pass on their first attempt has full access to all materials and support needed to pass on their second.

Q. How much time will the employee need to commit?

Most students spend 6-8 weeks in the program before sitting the exam. The self-paced format means they can work around existing responsibilities without a fixed schedule. We recommend aiming to take the exam within 6 months of beginning the program.

Q. How long will the employee have access to the system?

Essential students have 12 months of access by default. Preferred students have 3 years. Premier students have lifetime access. If more time is needed, simply email support@destcert.com to extend access.

Q. What if the employee doesn't pass on the first attempt?

They retain full access to all materials, ongoing live support sessions, and can book a private 1-on-1 debrief call to build a targeted plan for their second attempt, at no additional cost.
